

Lab0:

```
imlan@LAPTOP-K3FLC3IO MINGW64 ~/OneDrive/Documents/GitHub/CS471-labs (main)
$ mkdir Lab0

imlan@LAPTOP-K3FLC3IO MINGW64 ~/OneDrive/Documents/GitHub/CS471-labs (main)
$ touch Lab0/README.md
```

using git bash & github desktop, I created a new folder inside the repository named “Lab0”, and learnt that github disallows empty folders , So i added a README.md file.

after opening my repo on explorer , i can see the “Lab0” folder is visable on the correct path.
